

Abstract

A method for providing searchable electronic databases for use in tradeshow
and similar events. In the preferred embodiment, tradeshow information is collected
via the Internet and electronically compiled into a database in a format compatible
5 with a searchable reader software. The database is electronically stored on a CD, a
computer hard drive, a personal digital assistant (PDA) compatible database,
uploaded on a web page, or accessed on a wireless network located at the
tradeshow. A user may obtain a CD, a PDA download, or an access password for
the web page, and may access the database using a personal computer or a
10 computer system provided at the tradeshow.
